Optical Fiber Communication - Study Mafia

optical repeaters are purely optical devices that are used simply to combat attenuation in the fiber; typically spans of 80km upwards are now possible. the recent introduction of soliton transmission methods has increased the allowed distance between repeaters and systems spanning 130km without a repeater are now possible.

Fundamentals Of Optical Communications

optical communication uses infrared light "" c band is used commonly because of edfas. graded index fiber has a lower modal dispersion than step index fiber "" plastic fiber is cheaper than glass fibers dispersion shifted fiber is used in dwdm systems if a signal can travel 1600 km at 10 gbps, due to pmd it can travel 400 km at 40 gbps

Fiber-optic Communication Systems - Optiwave.com

- most suitable as communication channel because of dielectric waveguiding (acts like an optical wire).
- total internal reflection at the core-cladding interface confines light to fiber core.
- single-mode propagation for core size
